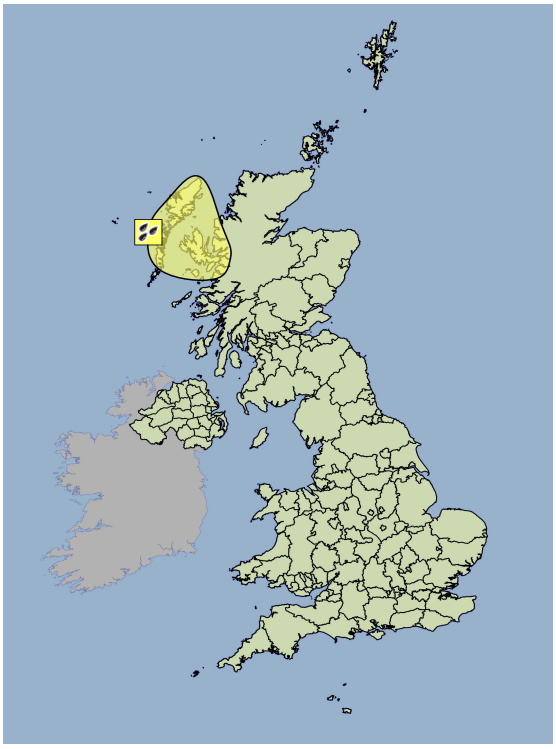
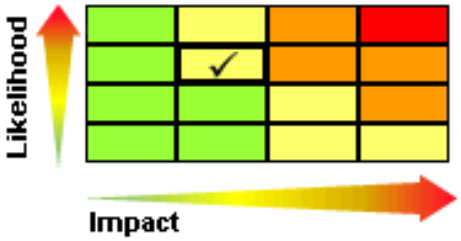
National Severe Weather Warning Service





Chief Forecasters Assessment
A low pressure system approaches northwest Scotland later today (Thursday), deepening as it does so to produce a period of heavy rain. Some uncertainty remains as to highest rainfall accumulations, but some places could see over 30 mm in just a few hours and the intensity of this rain may be sufficient to cause some minor flooding disruption.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **13:30 on Thu, 02nd May 2013** until **23:59 on Thu, 02nd May 2013**

Outbreaks of rain will turn persistent and heavy across the Western Isles, Skye, and the northwest of Lochaber during Thursday afternoon and evening. The public should be aware that there is a risk of localised flooding from small water courses and from surface water. The rain will become lighter during the early hours of Friday morning.
